

Woodland Health Practices Manual

Written for green industry professionals, land managers and forest industry professionals in the eastern U.S., this guide promotes land stewardship for the owner's enjoyment and for improved environmental quality. The handbook outlines small-scale natural areas management services including wildlife habitat enhancement, forestry practices, chosen tree release, creating natural havens, invasive plant and insect identification and control, creating food plots, and more.

The resource manual and the accompanying specialized checklist tool to help professionals determine which enhancement practices are suitable for a given property/site. The handbook includes an overview of land management techniques. The checklist and a set of tables to develop management actions will assist you in developing land care plans based on your clients' objectives.

This quiz reflects the material from the manual. Please take time to complete this quiz so that we can apply 4 continuing education credits to you MD-DE Master Logger status.

To receive four MD-DE Master Logger Continuing education credits:

1. Read the Woodland Health Practices Manual and Checklist.
2. Complete the 10 question quiz.
(We suggest having the quiz with you while reading the manual. Participants must get 9/10 questions correct)
3. Submit your completed quiz.

There are several ways to submit your quiz:

1. Complete this quiz online:
<https://go.umd.edu/WoodlandHealthCEC>
(Your submission will be sent us automatically)
2. Return the printed and completed quiz to us **By email:** Taylormr@umd.edu
3. Return the printed and completed quiz to us **By mail:** Taylor Robinson
